IN THE CLAIMS:

Claims 1 - 9 (cancelled)

claim 10 (new)

10. An electronic contactless, internal-power-sourceless, electromagnetic communication device module (MC): comprising,

an antenna (10) for receiving electromagnetic signals,

means (18, 20, 24) for processing the electromagnetic signals received, and

means (26) for rectifying and filtering the electromagnetic signals received in order to supply, at two output terminals (A, B), a supply voltage (Vcc) to the processing means (18, 20, 24),

and further comprising,

connection means (36, 38, 56, 58, 80, 82, 100, 102, 104, 106, 132, 140) for connecting the output terminals (A and B) of the rectifying and filtering means (28) to an external electrical power source (48, 70) carried by support means of the module (PC, MC, TM 138), the connection means comprise a

Amendment B
Page 4

switch (60, 86, 110, 134, 142) for making or cutting-off the connection between the external power source (48, 70) and the output terminals (A, B) of the rectifying and filtering circuit (26).

claim 11 (new)

11. A device according to claim 10 wherein said antenna consists of a single antenna.

claim 12 (new)

12. A device according to claim 10 wherein both power and data enter said device through said antenna.

claim 13 (new)

13. A device according to Claim 10 wherein the connection means comprise.

in the module (MC), conductors (32, 34) for connecting the output terminals (A, B) of the rectifying and filtering means to first contact terminals (36, 38, 82, 104, 106),

in the support means, conductors (50, 52) for connecting the external electrical power source (48, 70) to second contact terminals (56, 58, 80, 100, 102, 132, 140), and

Serial No.09/857 754
Amendment B
Page 5

means for connecting and holding together said first and second contact terminals.

claim 14 (new)

14. Use of a device according to Claim 13 in a contact-less module (MC) carried by a bankcard wherein

the support means of the external electrical power source comprise a card holder (PC) and

the means of connecting and holding said first (36, 38) and second (56, 68) contact terminals comprise means (42, 44, 46) of guiding and stopping the card (40) in the card holder (PC) so as to make said first and second contact terminals coincide.

claim 15 (new)

15. Use of a device according to Claim 13 in its application to a contactless module (MC) disposed in a casing (84), wherein,

the support means or the external electrical power source comprise a watch (MO) having its own electrical power (70)

Serial No.09/857 754
Amendment B
Page 6

the first contact terminals comprise a connector (82)
disposed on the casing (84) of the module.

the second contact terminals comprise a connector (80)
disposed on the casing (72) of the watch (M0), and

the first and second external connectors (80, 82) cooperate
with each other in order to establish the electrical
connections, and being held in said position by holding
means (88, 90).

82
claim 16

16. Use of a device according to Claim 13 in a contact-less

module (MC) disposed in a casing (108), wherein,

the support means of the external electrical power source
comprise a watch (M0) having its own electrical power (70),

the first contact terminals comprise pads (104, 106)
disposed on the base of the casing of the module (MC),

the second contact terminals comprise pads (100, 102)
disposed on the rear base of the watch casing, and

Serial No.09/857 754
Amendment B
Page 7

the connection and holding means of said first and second terminals comprise tags (112, 114) carried by the casing (108) of the module (MC), which snap into corresponding housings (116, 118) in a rear base of the watch casing.

claim 17 (new)

17. Use of a device according to Claim 13 in a contact-less module (MC) disposed in a casing (130), wherein,

62
the support means of the external electrical power source comprise a mobile telephone apparatus (TM) comprising pads (132) connected to a rechargeable electrical battery,

the second contact terminals comprise the pads (132) for recharging the battery or the mobile telephone apparatus (TM), and

the first contact terminals comprise pads which cooperate with the recharging pads (132).

claim 18 (new)

18. Use of a device according to Claim 10 in a contact-less module (MC) carried by a card of the bank type (40), wherein,

Serial No.09/857 754
Amendment B
Page 8

the support means of the external electrical power source comprise a mobile telephone apparatus (136) comprising a connector (140) designed to cooperate with the contacts of a card of the bank type,

the support card of the contactless module (MC) comprises the first contact terminals.

the connector (140) comprises the second contact terminals connected to the electrical power source. and

the connection between the first and second contact terminals takes place by insertion of the card (40) into the connector (140).

claim 19 (new)

19. A device according to claim 11 wherein the external electrical supply source is a removable battery.
